QUESTION 451

You have three computers that run Windows 7 SP1. All computers are connected to the same network subnet of 10.0.10.0/24. The computers' network location is set to the Work network. You need to join all the computers to a HomeGroup. What should you do first?

- A. Set the network location to the Home network.
- B. Enter the HomeGroup password.
- C. Enable Network Discovery.
- D. Configure Windows Firewall to allow the Netlogon service.

Answer: A

QUESTION 452

Hotspot Question

A company has Windows XP, Windows Vista, and Windows 7 computers. You receive the following emails.

Email 1

From: Company CIO

Message: We are in the process of upgrading all computers. We need to ensure that everyone is running Windows 7.

Email 2

From: System Administrator

Message: During the upgrades of all of the computers, we need to make sure we keep the user's Favorites folder, My Documents folder, and Outlook archive files.

Email 3

From: Accounting Department

Message: Our payroll application does NOT work on Windows 7. Should we be worried?

Consider each of the following statements. Does the information in the three emails support the inference as stated? (This question is worth three points.)

Answer Area

Yes No

- You can use the User State Migration Tool to automate the data migration process.
- You should use Windows XP Mode in the Accounting department.
- You need to perform a clean installation of Windows XP and install all applications.

Answer:

Answer Area

Yes No

- You can use the User State Migration Tool to automate the data migration process.
- You should use Windows XP Mode in the Accounting department.
- You need to perform a clean installation of Windows XP and install all applications.

QUESTION 453

Drag and Drop Question

Your company network includes a Windows Server 2008 R2 server named Server 1.

You use a client computer named Client1 that has Windows 7 Enterprise installed. Both computers are members of an Active Directory domain.

You want to automatically collect events from Client1 to Server1. Bandwidth delivery optimization will not be used along with the subscription.

You need to configure the required collector-initiated subscription.

What should you do?

(To answer, drag the appropriate configuration step or configuration steps to the correct target)

computer or target computers in the answer area. An answer choice can be used once, more than once, or not at all.)

| Target computers | Configuration steps | |
|------------------|--|----------------------|
| Client1 | Run wecutil.exe qc. | <input type="text"/> |
| Server1 | Run winrm quickconfig. | <input type="text"/> |
| | Add the computer account of Client1 to the local Administrators group. | <input type="text"/> |
| | Add the computer account of Server1 to the local Administrators group. | <input type="text"/> |

Answer:

| Target computers | Configuration steps | |
|------------------|--|---------|
| Client1 | Run wecutil.exe qc. | Server1 |
| Server1 | Run winrm quickconfig. | Client1 |
| | Add the computer account of Client1 to the local Administrators group. | Server1 |
| | Add the computer account of Server1 to the local Administrators group. | Client1 |

QUESTION 454

You have a computer that runs windows 7.
The computer has corporate intranet web site.
Your Windows Internet Explorer as shown in the exhibit.

You need to ensure that you can access web pages on both Internet and Intranet.
What should you do?

- A. From the tools menu, click Work Offline.
- B. From the Safety menu, click InPrivate Blocking.

- C. From the Safety menu, click Inprivate Browsing.
- D. From the Security tab, add the intranet web site to the Trusted sites zone.

Answer: A

Explanation:

Working Offline is activated

On Internet Explorer's File menu is a "Work Offline" item that toggles Internet Explorer between online and offline modes of operation. (The question originally stated the Tools menu, maybe in a different version of IE this is the case, but for me and in the TechNet documentation it was under Files, so I'm choosing to believe Tools was a mistake and it should be Files, this has been amended in the question). InPrivate is turned on (does not prevent browsing the internet) InPrivate Browsing helps prevent Internet Explorer from storing data about your browsing session. This includes cookies, temporary Internet files, history, and other data. Toolbars and extensions are disabled by default.

QUESTION 455

You work in an international company which is named Wiikigo. Before entering this company, you have two years of experience in the IT field, as well as experience implementing and administering any Windows client operating system in a networked environment.

You are professional in installing, upgrading and migrating to Windows 7, deploying Windows 7, and configuring Hardware and Applications and son on.

You are in charge of two computers that are respectively named C01 and C02. C01 runs Windows 7 and C02 runs Windows XP Professional.

On C01, you enable Remote Desktop as shown in the Remote Desktop exhibit.

What action should you perform?

- A. You should enable the Allow connections from computers running any version of Remote Desktop setting on C01.

- B. The Client (Respond Only) IPSec policy should be assigned on C02.
- C. Your user account should be added to the Remote Desktop Users group on C01.
- D. A firewall exception should be created for the Remote Desktop Protocol (RDP) should be assigned on C02.

Answer: A

QUESTION 456

You use a portable computer that has Windows 7 installed. The Computer has a single hard disk drive and a dual-core CPU.

You need to analyze the performance of the computer to meet the following requirements:

- Include the CPU, Memory, and Disk subsystems
- Send events to another computer for predefined Events IDS.

What should you do?

- A. Run powercfg.exe.
- B. Run the windows Experience Index
- C. Configure Event Viewer subscriptions
- D. Open Task Manager
- E. Open System Properties, and configure performance settings
- F. Open System Properties, and configure environment variables
- G. Open System Properties, and configure user profiles settings
- H. Open System Properties, and configure the page file settings
- I. Open Performance Monitor, and configure a Data Collector Set.
- J. Open Performance Monitor, and customize the System Monitor view.
